Zebra Pump

By Iris Rezoagli

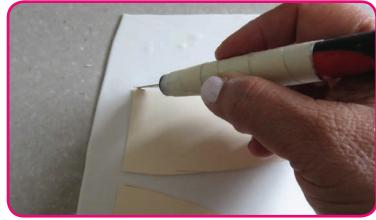

- 1. Cut a piece of 20 gauge wire to fit the length of the heel. Place wire in center of modeling paste as you fit it into the silicone heel mold. Place in the freezer for 10 minutes. Remove the heel from mold and let dry for 2 days.
- 2. Roll out modeling paste leaving the sole part thick and cut it with the sole cutter. Roll out another thinner piece of modeling piece and

repeat the process to create the insole, placing the piece on top of the platform.

- 3. Place the platform on the shoe ramp and glue the heel. Let dry for 5 days.
- 4. Roll modeling paste to 1/16" thick. Place the template on top and cut.

Iris Rezoagli is a talented pastry chef and cake decorator from Hicksville, Long Island who has been offering classes in gum paste shoe design for the last three years. Her accolades include Cake Central Magazine: Fashion Inspiration 2013; Cake Central Adore Book 2013; American Cake Decorating; ICES Magazine; Cake Design France Magazine; 2nd Place Winner for Animal Cake Contest, CakesWeBake.com; 2nd place winner Javitz Center 2013; 1st place Atlantic City Bakery Expo 2014; and a finalist in Martha Stewart's American Made.

- 5. Attach the shoe body to the platform with edible glue. Let dry for 2 days.
- 6. Roll the black modeling paste very thin.

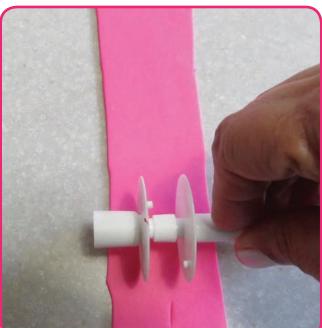

- 7. Place the black modeling paste on the top of the Silicone Onlay® and cover with parchment paper. Press down with the fondant smoother. Don't move it from side to side, just press down.
- 8. Remove parchment paper and peel out the unwanted stripes.
- 9. Apply a light application of water with a brush onto the modeling paste stripes.

10. Attach the modeling paste onto the shoe by removing the individual stripes and applying one at a time.
